Degree: B.E - AI & DS

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
  //type your code here
  struct Node *newnode = (struct Node*)malloc(sizeof(struct Node));
  newnode->item = item;
  if(*head==NULL){
    newnode->next=NULL;
    newnode->prev = NULL;
    *head = newnode;
```

```
24,180,104,9
newnode->next=NULL;
         struct Node *pos = *head;
         while(pos->next!=NULL){
         pos = pos->next;
         newnode->prev = pos;
         pos->next = newnode;
      }
    void displayForward(struct Node* head) {
      //type your code here
      struct Node* pos = head;
      while(pos!=NULL){
        printf("%c ", pos->item);
         pos = pos->next;
      printf("\n");
    void displayBackward(struct Node* tail) {
      //type your code here
      struct Node* pos = tail;
      while(pos!=NULL){
         printf("%c ", pos->item);
         pos = pos->prev;
                                                    241801049
printf("\n");
    void freePlaylist(struct Node* head) {
      //type your code here
      free(head);
    int main() {
      struct Node* playlist = NULL;
      char item;
scanf(" %c", &item);
if (item == '-') {
                                                    241801049
```
